ABSTRACTED-PUB-NO: JP 10011507A

BASIC-ABSTRACT:

The system has a work flow server (10) and a client (3) connected via network (1). Service for every user and work information for management of every job is stored and preserved in a work flow system database (11). The server responds to request from the client, and thereby refers to the database and displays job list and user list on display screen of client.

The work period for every job is also displayed along with job list. The charge of work period taken by user, is displayed in the user list along with information which relates to work load on time axis.

ADVANTAGE - Enables assignment of suitable work by each process. Enables to grasp work period and work load easily by each person.
